

# U.S. Class A Multifamily Sales Volume & Buying Trends – April 2021

COVID-19 surfaced in the United States in Mid-March 2020. Federal, state, and local governments responded by issuing strict stay-at-home orders and closing nonessential business. Trends in investment sales, vacancy rates, rent collection rates, and unemployment underscore the crippling effects of COVID-19 on American consumers and businesses alike. The United States Daily New Case table below highlights the progression of daily case counts relative to legislation imposed by state and local governments. As of Q2 2021, societal conditions surrounding the COVID-19 Pandemic have undoubtedly improved. Vaccines are now available to all individuals aged 16 or older in across the United States and hospitalizations and number of new cases continue to decrease. In addition, many states have ended all their preventative mandates and rules for businesses and individuals, while other states have opted to only loosen their regulations. Whereas social conditions continue to improve, markets are still being affected by COVID-19. As the calendar turns toward summer and restrictions continue to be lifted, investors will be looking for sustainable trends in transaction volume and pricing that have yet to occur.

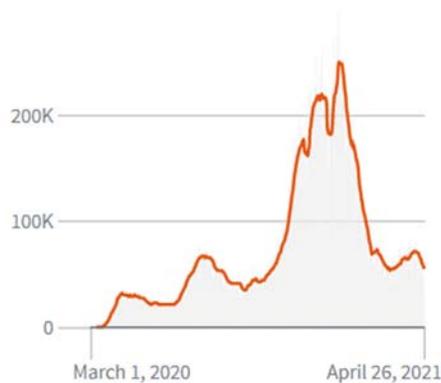

With COVID on the forefront, fundamentals in many major markets have been greatly altered. This publication analyzes sales trends in terms of number of transactions and dollar volume for multifamily properties across the United States national market.

Unemployment Rate - Five Year Trend

**Number of Sales Transactions**

- Parameters: All multifamily investment sales in the United States national market, segmented by location category.
- Consistent transaction volume from January 2019 to March 2020, with a high in December 2019.
- March 2020- initial COVID shockwaves grip market, number of transactions falls but does not plummet.
- Uptick in transaction volume June and July 2020, followed by declines in August and September 2020.
- October 2020 – April 2020- general upward trend in number of transactions.
- March 2021- 1,380 total transactions, the highest total of 2021, and the highest total since January 2020.
- April 2021- 1,244 total transactions, the second highest total of 2021.
- The market remains strong, despite less transactions since April 2020.

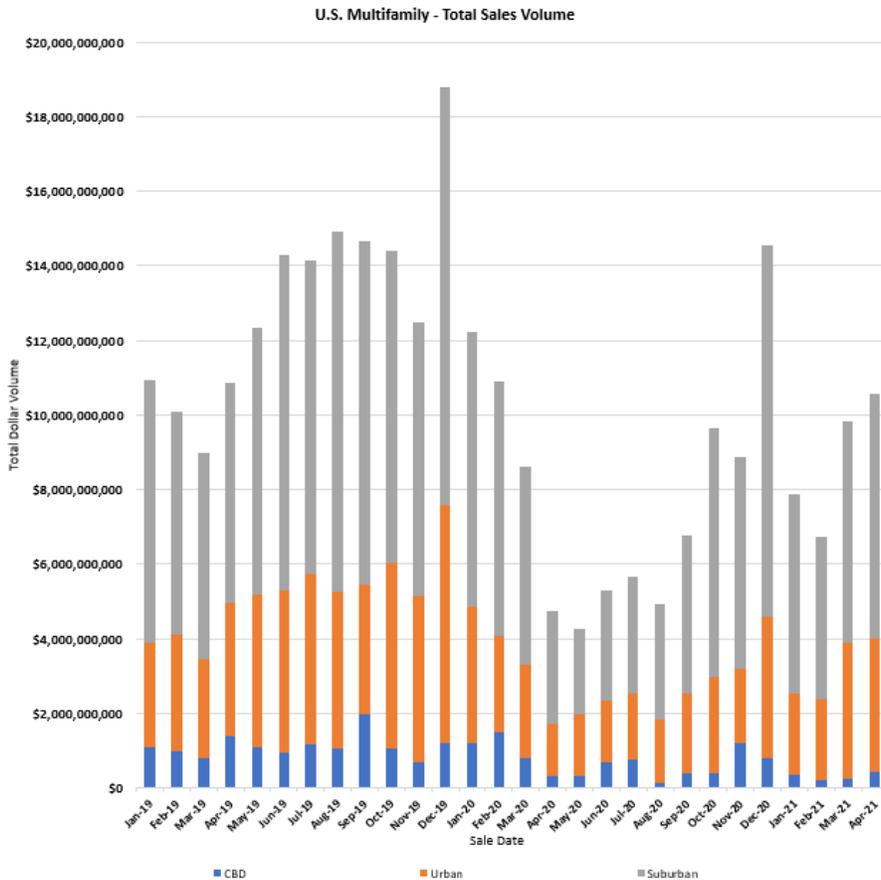

The multifamily markets have fared better than other markets during the post-COVID-19 era. Transaction volume was quick to rebound after the onset of COVID-19. Average sales per month are not too far off from pre-COVID levels, as evidenced by the chart. However, the market has not experienced the same level of consistency as was seen prior to April 2020. May 2021 statistics should shed light on whether the market can continue to increase following a busy April.

**Dollar Volume of Sales Transactions**

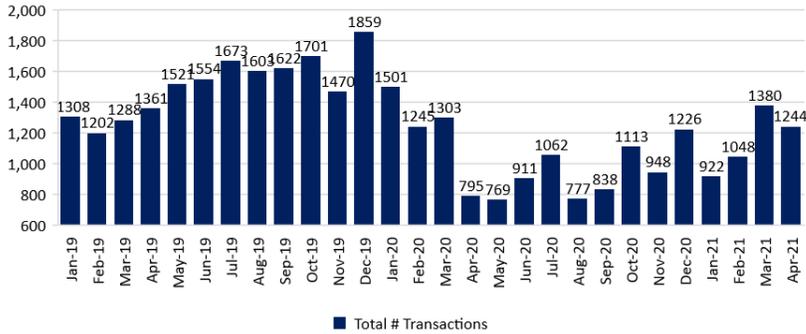

In 2019, the average monthly sales volume was approximately \$13.1 billion. Comparatively, the average monthly sales volume in 2020 was roughly \$8 billion, reflecting a decrease of approximately 38.5%. Thus far in 2021, the monthly average has risen 8.9% to a monthly average of \$8.8 billion. This is positive news. We tracked the dollar volume of monthly sales by category as seen below.

Total Dollar Volume - U.S. Multifamily			
YEAR	2019	2020	2021 (Jan - Apr)
<b>Min</b>	\$8,970,174,443	\$4,282,592,767	\$6,739,757,742
<b>Max</b>	\$18,780,564,765	\$14,539,362,992	\$10,580,224,128
<b>Average</b>	\$13,078,796,346	\$8,037,539,126	\$8,751,705,407
<b>% Difference</b>	-	-38.5%	8.9%

- Average sales volume from January 2019 to March 2020 was \$12,577,514,039.
- Average sales volume from April 2020 to April 2021 was \$7,672,318,207.
- The largest increase in dollar volume was 63.8% from November 2020 to December 2020.
- The largest decrease in dollar volume was 45.9% from December 2020 to January 2021.
- April 2020 through November 2020 did not eclipse total sales volume over \$10 billion.
- Sales from Suburban locations have generally comprised the largest share of all total sales.
- 60% of total March 2021 sales fell within the Suburban category.
- 62% of April 2021 sales fell within the Suburban category.
- April 2021 sales volume exceeded \$10 billion for the first time since December 2020.

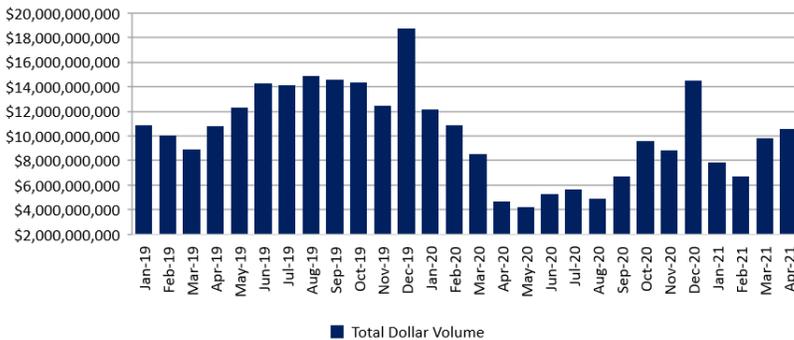

TOTAL NUMBER OF TRANSACTIONS - U.S. MULTIFAMILY

**SALES (2019-2021): Volume**

Pre-COVID-19, sales volume fluctuated at a relatively consistent level, ranging from 1,202 to 1,859 sales per month from January 2019 through March 2020. April 2020 marked a significant drop in the number of transactions. Transaction volume increased over the next few months, except for August and September 2020. December 2020 saw an increase from the previous month. The number of transactions in April 2021 decreased slightly from March 2021 but are well above the total of April 2020.

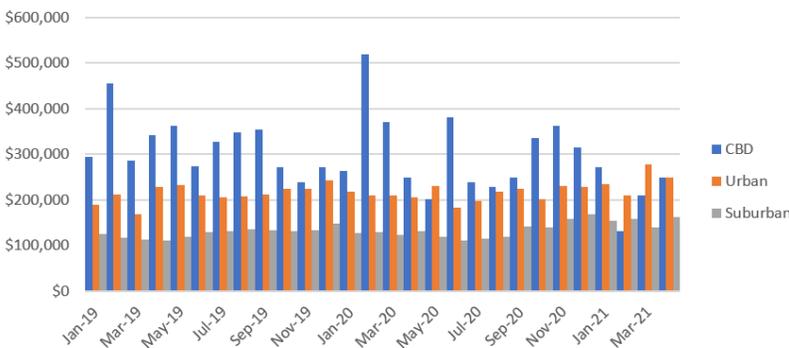

TOTAL SALES VOLUME - U.S. MULTIFAMILY

**Dollar Volume of Sales**

Whereas the number of transactions decreased in April, there was an increase in dollar volume. Totalling 1,244 transactions, 136 less than March 2021, dollar volume increased by almost 8%. The increase in total sales volume is a positive sign for the sector. April saw an 80% increase in CBD sales volume, a 3% decrease in Urban sales volume, and a 12% increase in Suburban sales volume from March.

SALE PRICE PER UNIT - U.S. MULTIFAMILY

**Sale Price Per Unit**

Over the period, sale price per unit in the Urban and Suburban segments has fluctuated very little, while the CBD segment has been declining. The CBD markets continue to suffer from COVID-19 related uncertainties. In the given period, CBD has averaged \$299,967 per unit, Urban has averaged \$217,099 per unit, and Suburban has averaged \$132,806 per unit. For the Urban and Suburban markets, the COVID-19 pandemic has not had a significant impact on the sales price per unit. Demand remains high in these segments, while the CBD markets remain off the radar for many investors.
